To Whom It May Concerns,

Pzartech develops a technology for spare parts that enables the quick identification of parts according to their geometry rather than through engraved numbers, tags or RFID (a short filmed demo: <http://bit.ly/1U8YPKq>).

Our goal is to reduce downtime by simplifying the identification of parts.

This technology that could save up to 7% of the maintenance time in the aerospace industry also interests the rail. We are in touch regarding it with DeutscheBahn, SNCF, MBTA and Alstom.
