UIUC, the Worldwide Railway Organisation, will jointly organise the 6th Edition of the Training on High Speed Systems Level II from 10 – 14 December 2018 in Madrid with the Spanish Railway Foundation FFE

(Paris, 21 September 2018) The second level of the Training on High Speed Systems (THSS) 2018 will take place in Madrid from 10 – 14 December 2018, jointly organised by UIUC, the Worldwide Railway Organisation and the Fundación de Ferrocarriles Españoles (Spanish Railway Foundation), FFE.

The programme is aimed at professionals already involved in any of the processes of High-Speed Rail (HSR) or who will be in the near future, whether working for railway companies or ministries, local authorities, universities, advisory bodies, agencies or associations: managers, strategy experts, decision-makers, economists, banks, industry, engineers...

The seminar participants do not need to have in-depth knowledge of any specific subject relating to HSR and a previous attendance to THSS-Level I is recommended but not necessary.

The main objectives of the Training are to:

- Offer in-depth and comprehensive insight into the High-Speed System
- Provide Managers with all the information needed to facilitate decision-making about HSR
- Definition on path/way to implement HSR
- Foster exchanges of experiences and information about the latest developments in the field
- Visit strategic points on the Spanish High-Speed System and discuss them on-site

This Training will allow the participants to attend lectures delivered by high level Experts in the field of High-Speed systems, giving them a 360-degree approach to HSR, as well as discussing their knowledge with other participants.

During the Training and on an alternating basis with the different theoretical sessions, the attendees will be divided into Groups to develop and discuss a real example of a project by assuming a particular role regarding the planning of an HSR system. They will have the help of the High-Speed Planner, a didactical tool especially designed for Level II of the UIUC High Speed Training.
A visit to the strategic points on the Spanish High-Speed System and discussing them on-site is also another special strength of this unique training.
