The international freight calculator tool EcoTransIT World presented by SNCF, Edifret and UIC wins the SITL Innovation Award

(Paris, 1 April 2011) SNCF, Edifret, the International Union of Railways (UIC) and the EcoTransIT Consortium are pleased to announce that the freight calculator tool EcoTransIT World received the 11th Logistics Innovations Awards during the International Trade Show Logistics Solutions. EcoTransIT has been selected among the 12 projects entered for the competition under the category “Most innovative transport and logistics organisation from the point of view of sustainability”.

The jury, composed of eight specialists from the supply chain management and sustainable development sectors, appreciated the business model proposed by EcoTransIT World, especially the partnership organisation and its free online Internet version. The innovative characteristics of the tool were key factors in the final selection / contributed to helping it win the award: worldwide and multimodal perimeter, SIG routing, high volume treatment capacity.

EcoTransIT World is an online calculator tool that evaluates how much energy and greenhouse gas is consumed by the carriage of goods. The new World version, launched in May 2010, for the first time calculates worldwide shipments by truck, train, airplane, ship or combined transport.

EcoTransIT’s methodology for calculating the environmental impacts has been developed by the German Institute for Energy and Environmental Research (IFEU) and the independent Institute for Applied Ecology Öko-Institut as well as IVE as the IT partner. In coordination with the International Union of Railways (UIC), a European network of seven railway companies and a logistics company guarantees the periodical updating of the controller’s influence factors and enriches the partner frame of the project.
