

JOINT PRESS RELEASE

European Rail Sector calls for synergies to realise High-Speed Rail Action Plan

(Paris, 17 October 2024) European passenger rail CEOs from the Community of European Railway and Infrastructure Companies (CER) and the International Union of Railways (UIC) were hosted by SNCF Voyageurs in Paris for their annual meeting to discuss their long-term vision for customers and passengers. In an opening address praising rail for embodying the European Project better than any other sector, connecting people, strengthening the Single Market and creating opportunities, Pierpaolo Settembri, Deputy Head of Cabinet of the European Commissioner for Transport and Tourism, reaffirmed the Commission's commitment to a strong High-Speed Rail Action Plan. The gathering resulted in a resolution laying the groundwork for collaborative opportunities to boost the modal shift to rail across Europe.

European travellers are increasingly looking to high-speed rail (HSR) as a fast, comfortable, and sustainable way to travel for business, family, and leisure. Conscious of this popular demand, passenger rail companies are eager for the European Commission to unveil its HSR Action Plan and were bolstered by Mr Settembri's positive indication of an investment in line with the estimated €546 billion needed to build the inclusive and accessible network that will open up high-speed rail for all kinds of customers and needs. The initial commitment could start around €340 billion to be progressively increased to €500 billion.

In the resolution adopted at the meeting, passenger rail leaders emphasise the importance of coordinated European action to ensure the successful delivery of this vision, starting with the construction of a genuine European High-Speed Network connecting all capitals and major cities, equipped for real high-speed and fluid cross-border transit, and fully synergised with regional and conventional long-distance rail services. Accelerating the rollout of the European Rail Traffic Management System (ERTMS) will be key in this regard. Strong public-private partnerships (PPPs) and tailored financing schemes, based for instance on the regulatory asset-based model (RAB), are crucial to ensure a smooth and sustainable execution of this ambitious plan.

At the same time, the resolution stresses that financial and bureaucratic burdens on rail must be reformed to level the playing field between transport modes and ensure the competitiveness of the sector, including fair energy taxation, faster certification for rolling stock and harmonised train path allocation.

Participants also reiterated their commitment to realising seamless cross-border rail ticketing, emphasising the recent and forthcoming achievements of the sector according to the CER Ticketing Roadmap. The rollout of the Open Sales and Distribution Model (OSDM), the

extension of booking horizons up to 6 months and the wider adoption of the CIT Agreement on Journey Continuation (AJC) are among the most notable signs of progress.

Sector solutions such as these are delivering on the goal of endowing citizens with up-to-date, intermodal booking systems, while preserving the competitiveness of railway undertakings. Passenger rail operators therefore call on the European Commission to support their uptake through a stable and balanced regulatory framework.

Rail is the most reliable partner for the EU's efforts to decarbonise the transport sector. CEOs are confident that with supportive Commission interventions, the sector's commitments and investments over the past years can yield the seamless booking and ticketing experiences and joined-up high-speed rail services that citizens want and need.

SNCF Voyageurs TGV-Intercités Director Alain Krakovitch said:

"I am proud to have welcomed European passenger rail representatives to this Paris edition of our annual meeting. I am also proud to have been able to present TGV M. This new generation of TGV is a flagship for SNCF Voyageurs and represents a real technical and industrial challenge on a European scale. High-speed rail is attracting more and more passengers, and long-distance connections are becoming the norm, making the train a concrete symbol for Europe. We need to continue building this high-speed network and developing European connections. I am convinced we are united by the same belief: rail is Europe's best answer to climate change, connectivity, and cohesion."

UIC Director General, François Davenne said:

"We are at a pivotal moment for European rail. Together with CER and our members, we are committed to delivering the Ticketing Roadmap, supporting seamless ticketing, ensuring a robust and fair Capacity Regulation, and advancing a European High-Speed Masterplan that makes rail the backbone of long-distance mobility. These priorities are not just technical or operational; they reflect the Europe we want to build more connected, sustainable, and resilient. By combining operational expertise, digital innovation, and shared standards, we are turning our collective vision into tangible benefits for passengers across the continent."

CER Executive Director Alberto Mazzola said:

"Passenger rail operators are excited to see the EU's high-speed rail ambitions move from a vision into concrete actions. A holistic European Commission Action Plan that fully integrates high-speed with regular services will not only boost travel options and EU connectivity, it will also be a primary tool to make Europe more competitive with faster and more comfortable rail connections and decarbonise the EU's transport sector via a modal shift to rail that could capture over 50% of the long-distance travel market by 2070."

About CER

The Community of European Railway and Infrastructure Companies (CER) brings together around 70 railway undertakings, their national associations as well as infrastructure managers and vehicle leasing companies. The membership is made up of long-established bodies, new entrants and both private and public enterprises, representing 79% of the rail network length, 77% of the rail freight business and about 90% of rail passenger operations in EU, EFTA and EU accession countries. CER represents the interests of its members towards EU policymakers and transport stakeholders, advocating rail as the backbone of a competitive and sustainable transport system in Europe. For more information, visit www.cer.be or follow us on Twitter [@CER_railways](#) or [LinkedIn](#).

About UIC

UIC is the worldwide organisation for the promotion of rail transport at a global level and collaborative development of the railway system. It brings together some 200 members on all 5 continents, among them rail operators, infrastructure managers, railway service providers, etc. UIC maintains close cooperation links with all actors in the rail transport domain around the world, including manufacturers, railway associations, public authorities and stakeholders in other domains and sectors whose experiences may be beneficial to rail development. UIC's main tasks include understanding the business needs of the rail community, developing innovation programmes to identify solutions to those needs, as well as preparing and publishing a series of documents such as reports, specifications, guidelines and IRS that facilitate the implementation of the innovative solutions.
