Presentation summary

Title: ISR International Service Reliability - Tracking and tracing of Freight Wagons in Europe

ISR platform allows to get information about freight wagons through an exchange between RU's about the movements of wagons by using a central platform.

Wagon mileage is also available through internal data processing.

Due to strict filtering rules, only RU can access the ISR database based on their role in the transportation. The relationship with the customers remains within each RU.

Thanks to the reception of Train running advice from IM's (RNE), ISR brings wagon monitoring during the train run and provide RU's with a strong interoperable layer.
