Cosmo Tech Asset Investment Optimization for Rail is a solution dedicated to railway infrastructure managers. It enables users to run what-if scenarios and optimization analyses of different maintenance and renewal strategies for their network.

**HOW DOES IT WORK?**

1. Get an overview of all the planned operations on your network.
2. Create optimized systemic maintenance and renewal plans.
3. Manage the network’s overall state, service quality & financial objectives.

Simulations are based on a model of rail networks as they really are: complex and interconnected.

**DISCOVER OUR USE CASE ON SWITCH MAINTENANCE.**

I’m an Asset Manager responsible for railway track. See how I can evaluate different investment strategies on the network.
